

Bridging Ages Webinar - Time Travels and education

The Time Travel Method is commonly used in schools and can in different ways contribute to learning. But how can we understand the learning processes in use during a Time Travel and how can we work together with teachers to achieve the best situation for the learners?

- Time Travel promotes life-long learning.
- Time Travel promotes stakeholder involvement in education.
- Time Travel promotes stakeholder involvement.
- Benefit of the Time Travel Method within the curriculum.

Mobilizing teachers for nationwide cooperation

Kaari Siemer

Head of educational department

Estonian National Museum

On February 7, 2018 at 10 a.m., 8400 students from all over Estonia participated in Time Travel. The historical destination was February 24th 1918, the date of publication of the declaration of independence of Estonian Republic.

Our first cooperation between museums and schools in the field of time travel was very fruitful. How did we get such a large audience? How did we continue our cooperation? What have we achieved so far?

The presentation introduces the nationwide cooperation project between Estonian schools and museums, during which five nationwide time travels have been conducted.
